SUMMARY

Full stack engineer building React/TypeScript applications and Go/Python services, with hands-on experience in Kubernetes, Docker, CI/CD, and cloud infrastructure. Experienced in taking products from design through implementation and deployment, with a UX background focused on turning complex workflows into simple, usable interfaces.

EXPERIENCE

Full Stack Engineer, Lockheed Martin

Apr 2025 – Present

- Designed and built a React/Redux/TypeScript dashboard with a Go REST API, replacing order-dependent deployment scripts with one-click environment deployment and live VM status tracking; cut deployment time from 30 minutes to 15 minutes.
- Built a responsive React/TypeScript storefront with a Go backend and PostgreSQL in 2–3 weeks using Figma and AI-assisted development; adopted by another team following a customer demo
- Extended a customer-facing Angular application with a responsive theme system and AI-compatible theme generator, replacing hardcoded styles with reusable theming components.
- Co-developed a shared JavaScript authentication package built around Keycloak that detects existing sessions, propagates JWTs to downstream services, and enforces role-based access control.
- Built Go services that deploy applications to provisioned VMs from user-uploaded specs and surface live status in the dashboard
- Designed a Go VM health manager that detects and automatically remediates failed VMs through restart, reprovisioning, or escalation, restoring service within ~5 minutes.

Go, TypeScript, React, Redux, Angular, PostgreSQL, Keycloak, Kubernetes, Helm, GitLab CI/CD, Ansible, Figma

DevSecOps Engineer, Lockheed Martin

Jan 2024 – Mar 2025

- Designed in Figma and shipped a ServiceNow onboarding workflow that replaced multiple forms and overlapping approvals with a single form and is now the program's standard process. Cut onboarding overhead time by ~1 day.
- Built a Django dashboard for OpenStack VM status, extending the backend to retrieve, sort, and display VM data for a ~100-person team
- Automated recovery for Jenkins, Gerrit, and Artifactory using Bash and Ansible, supporting 500+ developers across 5+ programs; provided tier-2 and on-call production support.
- Deployed Rancher across 3 Kubernetes clusters in an offline network using approved registries and Helm charts

Python, Django, Ansible, Bash, OpenStack, Kubernetes, Rancher, Jenkins

Software Engineer Intern, Lockheed Martin

May 2021 – Oct 2022

- Developed JavaFX tools for annotating sensor data and flagging maintenance errors, used by 50+ people

PROJECTS

- Guideroom** (React, Flask, Open3D | [Hackathon](#)): Web app that rates room accessibility from iPad LiDAR scans, using point-cloud algorithms to detect floors, count stairs, and analyze surfaces
- Study Buddy** (Django, PostgreSQL on AWS | [Course project](#)): Deployed web app for students to form study groups and schedule meetings
- Janko Whiteboard** (Django Channels, WebSockets, Redis | [Hackathon](#)): Real-time collaborative whiteboard with live chat and PNG export, deployed on Heroku

SKILLS

Languages: Java, Go, TypeScript, JavaScript, Python, Bash, SQL

Frontend: React, Redux, Angular, HTML, CSS/SCSS

Backend: REST APIs, Django, PostgreSQL, Keycloak, JWT auth, RBAC

Infrastructure: Kubernetes, Docker, Helm, Ansible, GitLab CI/CD, Jenkins, Rancher, Linux

Other: Git, Figma, AI-assisted development

EDUCATION

M.Eng, Computer Science, Virginia Tech

May 2026

B.S., Computer Science, University of Virginia

Dec 2023
